

Artifact Requirements

Packaged Platform

- Architecture: Linux x86_64.
- Main archive: `depreduce-artifact-issta2026.tar.gz`.
- Main image tag: `depreduce-artifact:issta2026`.
- Optional Zirgen archive: `depreduce-artifact-zirgen-issta2026.tar.gz`.
- Optional Zirgen tag: `depreduce-artifact-zirgen:issta2026`.
- Base image: `rust:1.91.0-bookworm`.

Reviewer Requirements

Reviewers need Docker or a compatible runtime:

```
docker load -i depreduce-artifact-issta2026.tar.gz
docker run --rm -it depreduce-artifact:issta2026
```

Recommended for the default path:

- CPU: 2 or more x86_64 cores.
- Memory: 8 GB RAM.
- Disk: at least 30 GB free.
- Network: basic; Bazel cache misses can still trigger downloads.

Optional Zirgen path:

- Disk: at least 100 GB free for the loaded optional image.
- Network: basic; Bazel cache misses can still trigger downloads.

Full real-project reruns need more CPU, memory, disk, network access, and time. Some external dependencies may no longer be available, so some projects may fail to build or run tests.

Software Included in the Image

- Rust 1.91.0 and Cargo.
- DepReduce release binaries: `depreduce` and `depstat`.
- Bazel 8.3.1 via Bazelisk.
- Buck2, installed from the Linux release binary used by the project CI.
- OpenJDK 17.
- C/C++ build tools.

- Python 3 with `numpy`, `scipy`, `pandas`, `matplotlib`, and `seaborn`.
- `strace`, `git`, `curl`, `wget`, `unzip`, and `zstd`.
